

About me

After a successful reconversion in web development, I managed to specialize my skills in front end development. I have two years of cumulative professional experiences in this field. I am a rail enthusiast and I had the opportunity to live a one year experience as a train driver that gave me autonomy and rigor. Nevertheless, it reinforced my first choice to be a developer. I have since updated my skills and I wish to put them in good use for your company

Loïs COULON

Front-end Developer
Full stack in progress
